

NGUYEN TRONG DUC

Software Engineer Fresher — .NET / Java / Full-Stack

District 7, Ho Chi Minh City, Vietnam | (+84) 347 078 222 | ntrduc1310@gmail.com

Portfolio: ntrduc1310.github.io | GitHub: github.com/ntrduc1310 | LinkedIn: linkedin.com/in/ntrduc1310

PROFILE SUMMARY

Software Engineer with hands-on experience shipping production features for **FPT.eHospital**, a hospital information system deployed at 300+ healthcare facilities. During a recent engineering internship at **FPT IS**, resolved 23 production issues, optimized 50+ SQL Stored Procedures, and cut form-integration time by 60%. Also engineered secure multi-tenant onboarding workflows at **ITC Group**. Solid foundation in **C#/.NET** and **Java/Spring Boot**, with growing expertise in Clean Architecture and applied AI. Looking to bring a results-driven, detail-oriented engineering approach to a full-time team.

TECHNICAL SKILLS

Languages: C# (.NET Core/Framework), Java 21, Python, SQL (PL/pgSQL, T-SQL), TypeScript, JavaScript

Frontend & Backend: React, Spring Boot 3.3, Entity Framework, Tailwind CSS, HTML/CSS, jQuery

Databases & Cloud: SQL Server, PostgreSQL (JSONB), MySQL, Firebase Cloud Functions

Architecture & Tools: Clean Architecture, AOP, JWT, RBAC, Agile/Scrum, Flyway, Swagger UI, Git/GitLab

Research & AI Interest: Diffusion Models, PyTorch, MediaPipe (applied in scientific research)

Language: English (TOEIC – Intermediate; proficient in reading technical documentation)

WORK EXPERIENCE

Software Engineer Intern — ITC Group

May 2026 – Jul 2026

Ho Chi Minh City, Vietnam

Stack: C#, ASP.NET MVC, SQL Server, JavaScript/jQuery, HTML/CSS, Git/GitLab

- Developed and maintained a secure multi-step onboarding wizard using Session/TempData to manage state across complex registration phases.
- Refactored C# controllers for multi-tenant systems, integrating cookie tracking and removing subdomain dependencies without violating SQL UNIQUE constraints.
- Modernized legacy UI by converting views to the PRG pattern and restructuring Master Page dependencies to fix critical UI bugs, while collaborating in an English-speaking Agile team on GitLab.

Backend Developer Intern — FPT IS (Healthcare Software Solutions Center)

Oct 2025 – Dec 2025

Ho Chi Minh City, Vietnam

Stack: C#, .NET Framework, SQL Server, T-SQL, Crystal Reports, ReportBuilder, Jira, SVN

- Delivered **6+ end-to-end hospital-record modules** (patient-transfer, rehabilitation-assessment, prescription forms) on the eHospital platform across two live deployments (Vĩnh Đức, Hóc Môn), covering UI binding, report/stored-procedure integration, and full CRUD.
- Refined and optimized **50+ complex SQL Stored Procedures**; replaced cursor-based logic with set-based SELECT queries in the statistical-reporting module, measurably speeding up data retrieval for large-scale hospital datasets.
- Resolved **15+ Jira-tracked production defects** against the live hospital database (DKHOCMON_HIS_PROD), including a critical app-crash bug and data-integrity issues in medical records — reaching an **84% first-pass QA rate**.
- Redesigned BHYT and Dịch vụ prescription print templates (Crystal Reports/ReportBuilder) — auto-numbered item lists, dosage-frequency logic, and cancelled-item strikethrough.
- Supported go-live at Hóc Môn General Hospital on-site: triaged clinician-reported issues in real time, traced data-integrity problems in production, and deployed hotfixes directly to hospital servers.
- Built and configured the next-generation HIS 2-hospital management system from source for a new hospital client, and supported catalog-data migration by mapping duplicated medicine IDs between legacy and new systems.

TECHNICAL PROJECTS

Load Balancing Task Management API (Capstone Project)

Jul 2025 – Oct 2025

Stack: React, TypeScript, Java 21, Spring Boot 3.3, PostgreSQL, Spring Security, JWT

- Built a load-balancing task engine with dynamic weighting algorithms and a React/TypeScript B2B frontend; secured with JWT, AOP role guards, and BCrypt password hashing.

Our Memories – AI Photo Booth (Android & AI Integration)

Mar 2026 – May 2026

Stack: Java (Android SDK), Clean Architecture, Firebase Cloud Functions, ML Kit, Gemini API

- Built a Clean-Architecture Android app with RBAC (4 roles), ML Kit/MediaPipe gesture-triggered capture, and Gemini API-powered serverless insights.

Research: Video Anomaly Detection using Diffusion Models

Apr 2025 – Mar 2026

Stack: Python, PyTorch, ST-GCN, Diffusion Models, OpenPose/MediaPipe

- Co-authored research on Dual-Conditioned Motion Diffusion (DCMD) for skeleton-based anomaly detection, achieving 0.891 AUC on the Avenue benchmark; awarded University-level Scientific Research Consolation Prize.

EDUCATION

Bachelor of Computer Science (Software Engineering)

2022 – Expected 2026

Ho Chi Minh City Open University (HCMOU)

- Core Subjects:** Data Structures & Algorithms, Database Management (SQL Server/PostgreSQL), Software Architecture, Object-Oriented Programming (OOP), Artificial Intelligence.
- Awards:** Google Developer Groups DevFest 2024, Career Development & Professional Consultation Program.
